Hei,

Fikk akkurat svar fra Charles om dette. Hva mener du om det han sier her:

I'm glad you are all doing well! So, the license is interesting in that it should allow someone else to work on the project if they are not directly doing UI development (i.e., you don't need a license to touch the code, just to develop against their product). I'm covered still for their code in the support window, but not for their product in the last couple of years... I happened to get an email from Telerik about renewing licensing so I asked them about options in this situation. In general though, portable .NET based user interface libraries are/were limited and Telerik had, and has, a great offering. That said, .NET has been going through a fairly aggressive open source process from Microsoft, and I think Win Forms is included in that (what the Telerik license essentially offers, a premium WinForms library). This is all new in the last year or two.

I think Avalonia is the current "direction" <https://github.com/AvaloniaUI/Avalonia>

If I remember correctly, the code should have the presentation (WinForms) "layer" separated out fairly well, so that changing the UI shouldn't affect the FEM/Domain too much. I would definitely keep the SQL lite / unit of work strategy used.

Jeg er ikke i stand til å mene så mye om det han sier. Hva tror du?

Hilsen
Knut Ivar

Hei,

Jeg tror det kunne funke om du kunne fått passord/login slik at lisens kan lastes ned

Mvh

Heisann! Takk det samme!

Det skal være UD som eier det. Vi "reimbursed" Charles da han kjøpte det. Det var i 2017. Er det noe "konkret" jeg kan spørre han om? Login /passord eller noe?

Dessverre er det benyttet noen tredjeparts biblioteker (Telerik, postsharp) for brukergrensesnitt etc. som jeg ikke har lisens på. Dermed blir det vanskelig å se hva som evt. mangler uten å få debugget koden. Men hvis det er du som eier lisensene til de ekstra bibliotekene og ikke utvikleren burde det kunne la seg gjøre å få sjekket litt mer
